

BRUMMELL

Spring 2018

The little black book for the City

On the road

Adventure special • Legendary explorers, mountaineers and trailblazers • The spirit of booze-free drinking
Swimming with horses • Alfa Romeo revs up • Shooting underwater • Tough tech • Robust watches

Beaumontde

Private jets, the golden age of cruise liners, a safari with serious style, and the reinvention of a classic biker jacket

↑ TAKE FLIGHT

Having a private aircraft at your disposal is one of life's biggest extravagances, but thanks to private aviation carrier Jetfly, there is now a more accessible way to fly in luxury. An eighth share buys you access 365 days a year to Jetfly's fleet of PC-12s, with 62.5 annual flying hours anywhere in Europe, plus 24/7 booking, flight management and aircraft maintenance handled by Jetfly. For those seeking adventurous getaways off the beaten track, Jetfly is launching the PC-24 this year – a new jet interior designed by Philippe Starck that's specially engineered to go 'off-road'. With a short take off and landing capability paired with large wheels, it can land on different runway surfaces, from grass fields to mountain strips. *From \$350,000 for an eighth share of a PC-12; jetfly.com*

← A NEW ERA

If you've never heard of Favre-Leuba, you might be surprised to learn that it's the second oldest watch house in the world. Last year saw the launch of the Bivouac 9000 in celebration of the brand's 280th anniversary. Inspired by a Favre-Leuba model from 1963, the new 48mm titanium behemoth is the first mechanical watch to contain an altimeter capable of measuring climbs of up to 9,000 metres. It works through a tiny, airtight alloy capsule that expands or contracts with slight changes in air pressure. This movement drives the mechanism that registers altitude by causing the red central hand to rotate around the 100-metre scale marked on the bezel, which can also be set according to prevailing conditions in order to provide an accurate height reading. £6,900; favre-leuba.com
